

Willow Paige Mauldin

willow@mauldin.me - Portland, Ore.

Founding Lead Engineer at **Triplemoon**

January 2026 - Present

- I am currently here building out our first engineering projects!

Senior Engineer at **Cadence Solutions, Inc.**

March 2022 - December 2025

- Built and scaled complex Epic EHR integration involving multiple HL7 standards (FHIR, HL7 v2, CDS Hooks, SMART on FHIR) from first partner to a repeatable process launching multiple health systems every quarter
- Provided DevOps support, owning multiple major version upgrades of large PostgreSQL DB without downtime, and building CI for the front-end, including production deployment and preview environments
- Built front-end and billing support for Chronic Care Management, expanding the company beyond one program
- Established standard technical interview and evaluated dozens of candidates from interns to engineering managers

Senior Engineer at **Commure, Inc.**

January 2021 - February 2022

- Tech lead for a greenfield desktop platform using Electron, TypeScript, and Rust that allows third-party applications to run in a hospital environment, working with product to decide on scope, technical trade-offs, and implementation timelines
- Used Rust and NodeJS to migrate data for over one hundred thousand patients off of a legacy system, reverse-engineering the data format and mapping to the target application's data scheme
- Owned the process for onboarding new junior engineers onto Karuna Health's web and mobile apps, and microservice-based back-end, creating onboarding material and providing individual mentorship
- In my first month, I solved a partial production outage that nobody was able to reproduce affecting a subset of users due to a misconfigured TLS certificate chain

Senior Full-Stack Engineer at **Karuna Health, Inc.** (Acquired by Commure, Inc.)

July 2020 - December 2020

- Became the go-to resource for infrastructure needs via Terraform and AWS, bringing large parts of existing bespoke infrastructure into source control, owning greenfield projects, and establishing processes using best practices
- Started working on Ruby on Rails for the first time, providing meaningful code review, contributing to complex bug fixes, and owning new full-stack feature development within weeks

Front-end Engineer at **Karuna Health, Inc.**

December 2019 - July 2020

- Spearheaded technical design, project management, and implementation for a rewrite of the mobile application in TypeScript + React Native, decreasing response latency from seconds to <200ms and reducing crashes by 90%
- Dramatically improved developer experience by creating CI/CD and tooling for a monorepo on the front-end, consolidating projects and eliminating breakage caused by non-atomic changes

Solo Founder at **Fluidnode LLC**

June 2017 - December 2025

- Built a modern website CMS platform tailored to golf and country clubs for 18 paying properties
- With TypeScript, Google Cloud Platform, and PostgreSQL, my platform increased tee-time conversions by over 60%, doubled membership leads, and provided >99.99% yearly uptime
